WEATHER OF CONCERN

Weather of Concern

- Elevated to extreme fire weather conditions due to a moderate to strong offshore Santa Ana Wind event today and tomorrow (today being the worst) over much of Southern California.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

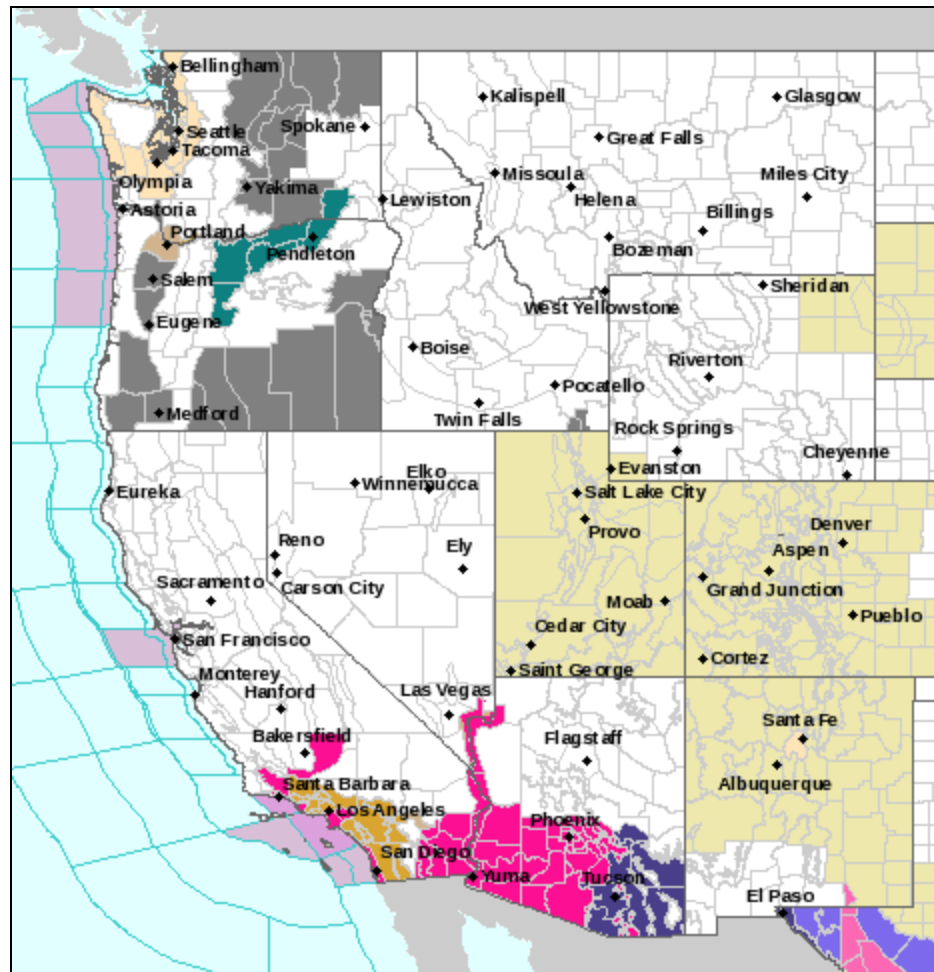

The ridge will remain in place through much of next week. This means very little change day to day in the sensible weather conditions. Temperatures will trend warmer and afternoon highs will generally range between 5 to 15 degrees above normal. Humidity values will be low and low for an unusually long stretch lasting, into next week. Wind conditions will be the most variable during this extended ridge period. In general, a broad N to NE and even offshore flow will impact the region during much of the next 7 days. However, there will be periods of more light and variable flows as well as enhanced or locally breezy N to NE winds. The likely time frames for the more enhanced N to NE winds appear to be Saturday night and the Tuesday/Wednesday period. It should also be mentioned that strong low level inversions will be present each day creating very little vertical mixing.

SOUTHERN CALIFORNIA

Northeast to east winds of 20 to 40 mph with gusts to 60 mph will continue to surface across much of Southern California through Friday morning as strong surface high pressure remains over the Great Basin. These winds will decrease to 15 to 30 mph with gusts to 50 mph Friday afternoon through Sunday afternoon as the surface high weakens a little. Local northeast to east winds of 10 to 20 mph with gusts to 35 mph will surface across the Sierra and the deserts through Sunday afternoon. A strong ridge of high pressure aloft over the West Coast will bring well above normal temperatures and very low humidity to the region through the middle of next week. Temperatures will be 10 to 15 degrees above normal, with 50s to low 60s across the mountains, 60s to low 70s in the Central California Valleys, and 70s to low 80s in the Southern California Valleys. Minimum humidity will be mainly in the single digits away from the San Joaquin Valley and its surrounding foothills and there will be very poor humidity recovery at night. Winds will remain offshore during the early to middle part of next week, but the strength of these winds remain in question. It will depend on how the upper ridge over the West Coast interacts with an area of low pressure that develops over Baja.
